

## Look-up in parameterization

Posted by torneca - 2008/03/10 17:45

---

Hello,

I've been having troubles when it comes to the parameterization menu, i can load all the grids and the discretized covers, but when i load the look-up tables to the menu, they don't come out as an option, even when they are loaded into the main page, so i don't know what to do to continue...

I attach the picture for better understanding, thanks a lot!!!

The Look-up table combobox is populated with DBF tables added to the map, as yours are, that match a specific schema. In order to be recognized as a land cover look-up table, it must contain the same fields that the provided NALC\_lut and MRLC\_lut look-up tables have:  
A, B, C, D, COVER, INT, N, and IMPERV.

Let me know if you have any more questions.

Shea
